SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

MEMORANDUM

DATE: December 9, 1983
TO: Combustion Unit Engineers
FROM: David E. Schwein, Supervising Engineer /s/ DES
SUBJECT: BACT – Cost Effectiveness Criteria

There appears to be confusion regarding the definition of the tons-of-air-contaminant-reduced component of the maximum cost per ton reduced BACT Screening Technique. From now on, the calculation of tons of air contaminant reduced will be done on a worst case, maximum capacity basis (as dictated by the size of the equipment or by permit conditions). Please discuss any problems this may cause with me as the problem develops.

Thank you.
